OAKLAND 5, CALIFORNIA

We are this season supplying one size of community pots. . Four inch pots with twenty or more plants per pot at \$15.00 per pot.

Two and one half inch and three inch pots, with 10 to 12 plants per pot. All plants in community pots are large enough to transplant into individual pots.

All seedlings are from the finest parents procurable. Extreme care has been taken in the selection of parents as to insure FINE GROWTH, PRODUCTIVITY, TEXTURE, COLOR, SIZE and SEASON OF BLOOM.

We are prepared to ship anywhere in the United States and its possessions, Canada, Central and South America, Cuba and the Philippine Islands. We comply with the new Hawaiian regulations regarding imports of Orchid plants.

For domestic shipment plants can be shipped in the pots. Railway express, express collect. For long distances and air shipment, we prefer to ship in paper pots. This cuts down the weight and greatly lowers the cost of shipment.

Overseas shipments should be accompanied by estimated shipping costs so shipment may be prepaid to avoid delay. Please clearly indicate method of shipping when placing order.

Second choice should be included in selecting varieties to replace any which may be sold out.

On all California orders kindly include, 3½ % sales tax.

It should be remembered that practically all of the plants we offer are ready for a shift during their present growing season. This is brought about by the fact that we do not over-pot.

Packing is free of charge for all plants on this list. Prices are F.O.B. Oakland, California, in U. S. Dollars.

All of our adult plants and specie plants are of blooming size and will bloom as their blooming season comes around.

This catalog cancels all previous lists.

We welcome visitors to our range at all times between the hours of 8 A.M. and 5 P.M. We are fifteen minutes from downtown Oakland and thirty minutes from San Francisco.

We, N. W. CURSON—ORCHIDS, give no warranty, expressed or implied as to the productiveness of any plants we sell and will not be in any way responsible for the crop. Our liability in all instances is limited to the purchase price of the plants.

CULTURE

Orchids are grown in every state in the United States and in nearly every country in the world. We have customers from Alaska to South Africa.

If a few simple rules are followed, Orchids can be grown in most any locality.

Heat, light, humidity and water are the main requirements, in Orchid growing.

Most Orchids like a temperature of 58 to 60 degrees farhenheit, minimum at night. With a 10 to 15 degree raise during the day.

Orchids like lots of light and fresh air, but no direct sunlight. Direct sunlight will burn the plants.

A filtered or reflected light is best. A shading of cheese cloth or spraying the glass with whiting reduces the light sufficiently, in most cases.

A high humidity of about 70° relative humidity, is the ideal condition for good growth in Orchid plants. They derive most of their feed from the moist air, as Orchid plants are mostly air feeders or epiphytes.

Orchids are grown in from small glass cases near a window, to elaborate, automatically controlled greenhouses.

As long as the conditions of light, heat and humidity are maintained, all the different growing conditions seem to give results. That is the production of flowers.

Over watering in the pots causes more damage to Orchid plants than any other mistake. Let the pots dry out between waterings. One soon learns to tell when they are dry by the weight of the pots.

About once a week for a 5 inch pot is about right for average conditions. Smaller pots need watering oftener.

As no two locations are alike one has to work out the conditions best suited to his local climate.

For the beginner most authorities recommend the following varieties.

Cattleya Percivalliana, *C. Trianae*, *C. Schroderae*, *C. Mossiae*, *C. Gaskelliana* and *C. Skinneri*.

Oncidium Splendidum and *O. Bicallosum*.

Epidendrum, *E. Atro-purpureum*, *E. Lionetianum* and *E. Alatum* varieties.

These are all strong growing plants, that require the same growing conditions, as to light, heat, humidity and water. And are inexpensive varieties.

Once one learns the requirements of these plants and grows them successfully, then one can try the more expensive fancy hybrids, without fear of losing any of the expensive plants.
